ABSTRACT

This research study examines the dimensions of lexical utilization in Tafsīr Ṭibyān al-Qur'ān, focusing on the key Arabic lexical items and their semantic functions within the exegesis. It aims to identify how the mufasssir employs aspects of Arabic lexicography such as root derivations, semantic constructions, and usage context to enhance interpretive clarity and depth. Particular attention is given to synonyms, antonyms, and contextual readings to elucidate the exegete's linguistic choices. In what dimensions does Tafsīr Ṭibyān al-Qur'ān employ Arabic lexicon, and how do these linguistic applications influence the commentary's narrative style, explanatory techniques, and semantic profundity? Adopting a qualitative and analytical approach, the study began by collecting lexical items from selected surahs and ayāt within Tafsīr Ṭibyān al-Qur'ān. Each term was analyzed for root morphology, syntactic structure, and context-specific meaning. Subsequently, synonyms and antonyms were identified, and their exegetical usages were compared. Finally, the research critically assessed how these lexical strategies affect the commentary's explanatory framework and rhetorical style.

Keywords:

Tafsir Ṭibyan al-Quran, Arabic Lexicon, Quranic Exegesis, Lexical Analysis, Semantic Interpretation, Root Derivation, Arabic Morphology, Contextual Meaning, Linguistic Dimensions, Qur'ānic Semantics.
